Professional Summary

Aspiring Data Scientist with experience in predictive modeling, healthcare analytics, and financial fraud detection. Skilled in building end-to-end machine learning pipelines including preprocessing, feature engineering, cross-validation, and performance optimization. Strong foundation in statistical analysis and model evaluation techniques.

Technical Skills

- **Programming:** Python, SQL
- **Data Analysis:** Pandas, NumPy, Exploratory Data Analysis, Feature Engineering
- **Machine Learning:** Logistic Regression, Random Forest, SVM, Cross-Validation
- **Evaluation Metrics:** Precision, Recall, F1-score, ROC-AUC
- **Deep Learning:** CNN, RNN, TensorFlow, Keras
- **Visualization:** Matplotlib, Seaborn
- **Tools:** Jupyter Notebook, Git, GitHub

Experience

Python Full Stack Development Intern

TAP Academy

July 2026 – Present

Bengaluru, India

- Developing web applications using **Python, Django, HTML, CSS, JavaScript, and SQL**.
- Implementing **CRUD operations, Django models, views, templates, and database connectivity**.
- Working with **Pandas, NumPy, and data analysis** while building full-stack applications.

Leadership & Experience

Design Team Lead – Dhruva Club, VIT-AP University

2025

- Led design activities for club events, campaigns, and awareness programs.
- Designed posters, banners, social media creatives, and event branding materials.

Technical Team Member – CSI, VIT-AP University

- Supported technical workshops, student activities, and event coordination.

Data Science Projects

CKD Prediction System

[GitHub](#)

Developed a hybrid **LSTM-GRU model** for Chronic Kidney Disease prediction and future trend analysis. Performed data preprocessing, feature engineering, and normalization on clinical data. Trained the hybrid deep learning model to capture temporal patterns and generate future predictions, evaluating performance using appropriate classification and prediction metrics.

Credit Card Fraud Detection

[GitHub](#)

Developed machine learning models on an imbalanced transaction dataset for fraud detection. Applied class weighting to improve fraud recall and evaluated models using **ROC-AUC, Precision, Recall, and F1-score**.

Food Quality Detection (CNN)

[GitHub](#)

Designed and trained a **CNN** for food freshness classification using 2,000+ labeled images. Applied image augmentation and dropout regularization to reduce overfitting, achieving approximately 90% validation accuracy.

Research Publication

Comparative Analysis of Machine Learning and Deep Learning Models for Credit Card Fraud Detection

IEEE Conference Publication, 2025

[View Publication](#)

Conducted a comparative evaluation of Logistic Regression, Decision Tree, Random Forest, Support Vector Machine, k-Nearest Neighbors, and Recurrent Neural Networks for credit card fraud detection. Assessed model performance using Accuracy, F1-score, and AUC-ROC metrics, identifying Random Forest and SVM as the most robust and accurate approaches for real-time financial fraud detection systems.

Education

VIT Andhra Pradesh, B.Tech in Computer Science and Engineering (CGPA: 8.5/10)

2022 – 2026

Montessori School, Kurnool, SSC (98%)

2019 – 2020

Certifications

- [Oracle Cloud Infrastructure 2025 – DevOps Professional \(Oracle\)](#)
- [Oracle Cloud Infrastructure 2025 – Foundations Associate \(Oracle\)](#)
- [Android Development – E-Cell IIT Roorkee](#)
